Why BrownAI? What Students Told Us.

FORMATIVE STUDY → DESIGN LOGIC

We designed because students asked for it.

1 UNIFY INFO

Campus information is scattered across different websites, apps, and offices.

→ One place to find connected campus information

STUDENTS SAY

"Shuttles, emergency contacts, housing, and portals all live in different places."
P08_M015

"For research talks and faculty projects, I search emails and department pages. I want one place to ask."
P05_M022

"I need PassioGo and RIPTA separately, even when I am planning one trip."
P06_M005

2 COMPLETE TASKS

Students need help coordinating steps and people to reach a finished outcome.

→ Coordinated planning and follow-through

STUDENTS SAY

"To arrange a TA meeting, I collect everyone's availability, then try a separate site to book a room."
P07_M018

"After finding an event, I still check the deadline, compare my calendar, and add it myself."
P05_M013

"Organizing a student event involves registration, spaces, and campus approval rules."
P02_M015

3 SAVE TIME

Repeated checking and trial and error turn simple tasks into extra work.

→ Fewer repetitive steps and avoidable checks

STUDENTS SAY

"To book a Lindemann room, I test each possible hour in Google Calendar one by one."
P04_M020

"Checking ingredients for every dish gets tedious. I want suitable meals highlighted automatically."
P06_M022

"I keep watching full classes for a seat to open. The window can be brief."
P02_M002

RESPONSIBLE USE of AI

SOURCE-LINKED ANSWERS

"I would trust an answer more if it linked to the original Brown page."
P03_M035

CHECKABLE, CURRENT INFORMATION

"An official-looking page might describe a project that ended years ago."
P07_M029

USER CONTROL OVER PLANS

"Let the chatbot propose a course plan, but I want to decide and register myself."
P03_M036
